

## News Release

Approved for Public Release, Distribution Unlimited

17 January 2017

### **SEA SECURES PLACE ON THE CROWN COMMERCIAL SERVICE TRAFFIC MANAGEMENT TECHNOLOGY FRAMEWORK**

Cohort company SEA has been awarded the status of an approved supplier by the Crown Commercial Service (CCS) to provide traffic technology to the public sector.

The Traffic Management Technology Framework (TMT2) agreement comprises some 30 companies who are approved to supply traffic monitoring and enforcement cameras and intelligent transport systems to local authorities and national transport management bodies.

Work valued up to £750m. a year is awarded to framework companies by public sector organizations including Highways England (HE), devolved administrations, local transport authorities, and Transport for London (TfL). Companies are pre-qualified for work and invited to compete via the CCS portal.

SEA's ROADflow Traffic Enforcement Team has installed its traffic signal junction, traffic monitoring and traffic enforcement cameras most recently in Cardiff, while also being selected by Transport for London (TfL) to further develop and provide ongoing support of its Digital Traffic Enforcement System (DTES) and to develop and support a Parking Enforcement Solution (PES) Mobile Application.

SEA Managing Director Steve Hill commented: "Our appointment as an approved supplier by the CCS reflects the continued successful development of our ROADflow technology and support services. The effectiveness of ROADflow in improving safety and helping to reduce traffic congestion is making an important contribution to the traffic management agenda of local authorities and other organisations responsible for highways."

#### **Notes to Editors:**

**CCS** is a public sector organisation working on behalf of the public sector to save money for the public sector and the taxpayer. CCS operates a number of aggregated commercial framework agreements to provide significant savings for the taxpayer, helping to protect the delivery of front line services. These frameworks are available for use by any public sector organisation - including the third sector - covering a wide range of goods, services and support. All public sector organisations can access these frameworks for free.

**Cohort plc** is an independent technology company and the parent company of four innovative, agile and responsive businesses, EID, MASS, MCL and SEA, providing a wide range of services and products for UK, Portugal and international customers in defence, security and related markets.

**SEA** was acquired by Cohort plc in 2007 and today is a major supplier of applied research, technology development, systems integration, specialist electronic systems, engineering and software design services to the defence and security markets. Its engineering and project management skills include naval communications systems, maritime combat systems, through-life support, dismounted soldier systems, subsea engineering and traffic enforcement. Complementing its work for the UK Ministry of Defence, SEA is growing its business overseas and extending its expertise into adjacent markets, including offshore, railways and roads.

SEA employs circa 300 high-calibre staff and has offices in Beckington, Bristol, Barnstaple and Aberdeen.
